Chapter 0 Introduction	1
0.1 Audience, Highlights, Agenda	1
0.2 Software Installation	4
0.3 Acknowledgments	6
Chapter 1 Cash Account Evolution	7
1.1 Symbolic Solutions of ODEs	7
1.2 Numerical Solutions of ODEs	13
Chapter 2 Stock Price Evolution	25
2.1 What are Stocks?	25
2.2 Stock Price Modeling: Stochastic Differential Equations	26
2.2.1 Idea of Stochastic Differential Equations	26
2.2.2 Normal Distribution	27
2.2.3 Markov Random Processes	33
2.2.4 Brownian Motion	34
2.2.5 Stochastic Integral	38
2.2.6 Stochastic Differential Equations	43
2.3 Itô Calculus	46
2.3.1 Itô Product Rule	46
2.3.2 Itô Chain Rule	47
2.3.2.1 Itô Theorem	47
2.3.2.2 Monte–Carlo Simulation “Proof” of the Itô Theorem	49
2.3.3 An Application: Solving the Simplest Stock Price SDE Model	51
2.4 Multivariable and Symbolic Itô Calculus	56
2.4.1 Monte–Carlo Solver for m -Dimensional SDEs	56
2.4.2 Symbolic m -Dimensional Itô Chain Rule	60
2.4.2.1 Some Calculus and Linear Algebra	60
2.4.2.2 Derivation of the m -Dimensional Itô Chain Rule	63
2.4.2.3 Implementation of the m -Dimensional Itô Chain Rule	65
2.4.2.4 Itô Product Rule Revisited	68
2.4.3 The Simplest Price Model: m -Stocks	69

2.4.3.1	Derivation	69
2.4.3.2	Example; Using Multinormal Distribution	71
2.5	Relationship Between SDEs and PDEs	79
Chapter 3 European Style Stock Options		83
3.1	What Are Stock Options?	83
3.2	Black–Scholes PDE and Hedging	87
3.2.1	Derivation of the Black–Scholes PDE	87
3.2.2	Black–Scholes Hedging Implemented	91
3.2.2.1	Put Hedging Implemented	91
3.2.2.2	Call Hedging Implemented	98
3.2.3	Probabilistic Interpretation of the Solution of the Black–Scholes PDE	102
3.2.3.1	Derivation	102
3.2.3.2	An Experiment	104
3.3	Solving Black–Scholes PDE Symbolically	107
3.3.1	Heat PDE	107
3.3.1.1	Probabilistic Derivation of the Solution of Heat PDE	107
3.3.1.2	Solving Heat PDE: Examples of Explicit Solutions	110
3.3.1.3	Uniqueness for Heat PDE with Exponential Growth at Infinity	112
3.3.1.4	Monte–Carlo Simulation Solutions of PDEs	114
3.3.2	Reduction of Black–Scholes to Heat PDE	116
3.3.3	Solution of Heat PDE; Back to Black–Scholes PDE	120
3.3.4	Black–Scholes Formulas	128
3.3.4.1	Options Volatility	128
3.3.4.2	Put–Call Parity	132
3.3.4.3	Sensitivity Analysis	132
3.4	Generalized Black–Scholes Formulas: Time-Dependent Data	136
Chapter 4 Stock Market Statistics		141
4.1	Remarks	141
4.2	Stock Market Data Import and Manipulation	141
4.3	Volatility Estimates: Scalar Case	149
4.3.1	First Method	149
4.3.2	Second Method	151
4.3.3	Experiments: Estimating Volatility	152
4.3.4	Real Data: Estimating Volatility	153
4.4	Appreciation Rate Estimates: Scalar Case	153
4.4.1	An Estimate	153
4.4.2	Confidence Interval	154
4.4.3	Monte–Carlo Experiments: Estimating the Appreciation Rate	156
4.5	Statistical Experiments: Bayesian and Non-Bayesian	157

4.5.1	Mathematical Framework for Statistical Experiments and Estimation	157
4.5.2	Uniform Prior	158
4.5.3	Non-Uniform Prior	161
4.5.4	Unbounded Parameter Space	163
4.5.4.1	Non-Uniform Prior	163
4.5.4.2	“Uniform Prior”	165
4.5.5	Bayesian and Non-Bayesian Appreciation Rate Estimates	166
4.6	Vector Basic Price Model Statistics	168
4.6.1	Volatility in the Vector Base Price Model	168
4.6.2	Non-Bayesian Estimate for the Vector Appreciation Rate	170
4.6.3	Bayesian Statistical Estimate for the Vector Appreciation Rate	171
4.6.4	Experiments: Statistics for Vector Basic Price Model	172
4.6.4.1	Experiment Set Up	172
4.6.4.2	Estimate of $\sigma.\sigma^T$	174
4.6.4.3	Non-Bayesian Estimate for a	175
4.6.4.4	Bayesian Estimate for a	176
4.6.5	Volatility and Appreciation Rate Estimates for Real Vector Data	178
4.6.5.1	Data Import and Formatting	178
4.6.5.2	Estimating and Using $\sigma.\sigma^T$	179
4.6.5.3	Non-Bayesian Appreciation Rate Estimates	180
4.6.5.4	Bayesian Appreciation Rate Estimates	181
4.7	Dynamic Statistics: Filtering of Conditional Gaussian Processes	183
4.7.1	Conditional Gaussian Filtering	183
4.7.2	Kalman–Bucy Filtering Implemented	184
4.7.2.1	General Equations	184
4.7.2.2	Recursive Estimates for the Appreciation Rate	186
4.7.2.3	An Experiment	188
4.7.3	Conditional Gaussian Filtering Implemented: An Example	192
4.7.3.1	Filtering Equations	192
4.7.3.2	Monte–Carlo Simulation	193

Chapter 5 Implied Volatility for European Options 197

5.1	Remarks	197
5.2	Option Market Data	198
5.3	Black–Scholes Theory vs. Market Data: Implied Volatility	204
5.3.1	Black–Scholes Theory and Market Data	204
5.3.2	Constant Implied Volatility	208
5.3.2.1	Single Option Implied Volatility	208
5.3.2.2	Average Implied Volatility	212
5.3.2.3	The Least “Squares” Constant Implied Volatility	212

5.3.3	Time-Dependent Implied Volatility	215
5.3.3.1	Time-Dependent Implied Volatility: “Symbolic” Solutions	215
5.3.3.2	Market Timing?	218
5.4	Numerical PDEs, Optimal Control, and Implied Volatility	220
5.4.1	Remarks	220
5.4.2	Tridiagonal Implicit Finite Difference Solution of Parabolic PDEs	220
5.4.3	Pricing European Options with Stock Price Dependent Data	230
5.4.4	Dupire Partial Differential Equation	233
5.4.4.1	Formulation and Verification	233
5.4.4.2	Numerical Solution of the Strike Price Dependent Dupire PDE	236
5.4.4.3	A Numerical Implied Volatility Problem	236
5.4.5	Optimal Control of Differential Equations	236
5.4.5.1	Optimal Control of ODEs with Quadratic Cost: Explicit Solutions	236
5.4.5.2	An Example	239
5.4.5.3	An Extension	243
5.4.5.4	Yet Another Extension	245
5.4.6	General Implied Volatility: Optimal Control of Dupire PDEs	247
5.4.7	Computational Example: Call Implied Volatility for QQQ	253
5.4.7.1	Data Import	253
5.4.7.2	Single Iterative Step of the Steepest Descent Method	254
5.4.7.3	Iteration	261
Chapter 6 American Style Stock Options		267
6.1	Remarks	267
6.2	American Options and Obstacle Problems	268
6.2.1	American Options, Optimal Stopping, and Obstacle Problem	268
6.2.2	Equivalent Formulations of Obstacle Problems	273
6.2.2.1	Variational Inequality Problem	273
6.2.2.2	Calculus of Variations Problem	274
6.2.2.3	Complementarity Problem	277
6.2.2.4	Fully Non-Linear PDE Problem	278
6.2.2.5	Semilinear PDE Problem 1	278
6.2.2.6	Semilinear PDE Problem 2	280
6.2.2.7	Free Boundary Value Problem	281
6.2.2.8	Computing Solution: Free Boundary Value Problem	281

6.2.2.9	Computing Solution: Maximal Boundary Value Problem	283
6.2.2.10	Free Boundary Value Problem: Non-Uniqueness	284
6.2.2.11	Maximal Boundary Value Problem: Uniqueness	287
6.2.3	“Perpetual American Options”	289
6.2.3.1	Steady State Obstacle Problem for Black–Scholes PDE	289
6.2.3.2	Steady State Obstacle Problem for Dupire PDE	293
6.2.4	Fast Numerical Solution of Obstacle Problems for Black–Scholes PDE	296
6.2.5	Fast Numerical Solution of Obstacle Problems for the Dupire PDE	303
6.3	General Implied Volatility for American Options	309
6.3.1	Implied Volatility via Optimal Control of Obstacle Problems	309
6.3.2	Tridiagonal Solver for Parabolic PDEs in Non-Cylindrical Domains	313
6.3.3	Computational Example: Put Implied Volatility for QQQ	318
6.3.3.1	Data Import	318
6.3.3.2	Single Iterative Steepest Descent Step	320
6.3.3.3	Iteration	327
6.3.3.4	Final Result	330
Chapter 7 Optimal Portfolio Rules		335
7.1	Remarks	335
7.2	Utility of Wealth	336
7.3	Merton’s Optimal Portfolio Rule Derived and Implemented	338
7.3.1	Derivation of Equations: Cash Transactions, Wealth Evolution	338
7.3.2	A Non-Optimal Hedging Strategy Implemented	341
7.3.2.1	Data	341
7.3.2.2	Market Evolution	342
7.3.2.3	Monte–Carlo Simulation of Trading	343
7.3.3	Stochastic Control Problem	349
7.3.3.1	Derivation of the Hamilton–Jacobi–Bellman PDE	349
7.3.3.2	Monge–Ampère PDEs	351
7.3.3.3	Derivation of Merton’s Monge–Ampère PDE	353
7.3.3.4	Symbolic Solution of Merton’s Monge–Ampère PDE	354
7.3.4	Optimal Portfolio Hedging Strategy Implemented	357
7.3.5	Fringe Issues	362
7.3.5.1	An Alternative Approach	362
7.3.5.2	Optimal Portfolio Balance Evolution	364
7.3.5.3	Time-Dependent Market Dynamics	365
7.4	Portfolio Rules under Appreciation Rate Uncertainty	367

7.4.1	Statement of the Problem and Solution of the Easy Case . . .	367
7.4.2	A New Portfolio Rule via Calculus of Variations	369
7.5	Portfolio Optimization under Equality Constraints	373
7.5.1	Portfolio Optimization under General Affine Constraints	373
7.5.1.1	Affine Constraints: Introduction	373
7.5.1.2	Wealth Volatility Minimization	375
7.5.1.3	Stochastic Control under Affine Constraints on the Portfolio	378
7.5.1.4	Examples	384
7.5.1.5	Time-Dependent Market Dynamics	386
7.5.2	Portfolios Under Affine Constraints and Appreciation Uncertainty	387
7.5.3	A Quadratic Constraint: Constraint on Wealth Volatility . . .	390
7.5.3.1	Solution under the Constraint on Wealth Volatility . . .	390
7.5.3.2	Affine Constraint together with Constraint on Wealth Volatility	392
7.6	Portfolio Optimization under Inequality Constraints	395
Chapter 8 Advanced Trading Strategies		403
8.1	Remarks	403
8.2	Reduced Monge–Ampère PDEs of Advanced Portfolio Hedging . . .	404
8.2.1	Advanced Optimal Portfolio Hedging Problems	404
8.2.1.1	The Fundamental Trichotomy	404
8.2.1.2	Market Dynamics	405
8.2.1.3	Market Dynamics Example: Appreciation-Rate Reversing Model	406
8.2.1.4	Stochastic Control Problems	410
8.2.2	Derivation of the Monge–Ampère PDEs	411
8.2.2.1	No Constraints	411
8.2.2.2	Affine Constraints	414
8.2.3	Reduced Monge–Ampère PDEs of Advanced Optimal Portfolio Hedging	418
8.2.3.1	No Constraints	418
8.2.3.2	General Affine Constraints	422
8.2.4	Computational Examples of Advanced Portfolio Hedging . . .	427
8.2.4.1	Advanced Portfolios of Stocks with and without Affine Constraints	427
8.2.4.2	Advanced Hedging of Options	435
8.3	Hypoelliptic Obstacle Problems in Optimal Momentum Trading . . .	445
8.3.1	Problems	445
8.3.2	SDE Model: Price/Trend Process	446
8.3.2.1	ODE Motivation	446
8.3.2.2	Price/Trend Process	448

8.3.3	Hypoellipticity of the Infinitesimal Generator of the Price/Trend Process	453
8.3.3.1	\mathcal{L} : Infinitesimal Generator of the Price/Trend Process	453
8.3.3.2	Hypoellipticity and Probability: Simple Examples	454
8.3.3.3	Hypoellipticity of the Infinitesimal Generator \mathcal{L}	459
8.3.3.4	Dirichlet Problem for \mathcal{L}	460
8.3.4	Optimal Momentum Trading of Stocks	461
8.3.4.1	Obstacle Problem for \mathcal{L} : When is it optimal to sell a stock?	461
8.3.4.2	“Implicit” Obstacle Problems for \mathcal{L}	464
8.3.5	Optimal Momentum Trading of Stock Options	467
8.3.5.1	Obstacle Problem for $\frac{\partial}{\partial t} + \mathcal{L}$: When to sell a call/put option?	467
8.3.5.2	Implicit Obstacle Problem for $\frac{\partial}{\partial t} + \mathcal{L}$: When to buy a call/put option?	471
	Bibliography	473
	Index	477
